WPI Research Experience for Undergraduates
in Industrial Mathematics and Statistics
May 29, 2013 - July 26, 2013

In this program, students work in teams on real problems that come directly from business and industry. They work closely with a company representative to define the problem and to develop solutions of immediate value to the company. They are guided by a faculty advisor to maintain a clear focus on the mathematical issues at the core of the project.

The REU program at WPI will answer questions like:

- What is the role of a mathematician in business and industry?
- What is it like to work with technical experts on a problem that requires significant mathematics but also must satisfy real-world constraints?
- What kind of mathematical and statistical tools are used to solve problems in business and industry?

Each participant will receive a $4300 stipend and housing for the program, along with support to defray the cost of travel to Massachusetts.

To apply and to obtain more details go to  http://www.wpi.edu/+CIMS/REU
Application deadline is March, 1, 2013.
We will begin reviewing applications February 19, 2013.
