1. Simple Mechanisms

Mechanism: A bar and joint framework (in the plane)
Some vertices have been pinned to the ground,
It has one degree of freedom.

Example: Watt Mechanism

2. Cognate Pairs

Cognate Mechanisms: A pair of mechanisms and tracing points such that the traced curves are locally identical.

$$[(M, p), (M', p')]$$

Cognate Mechanisms: A pair of mechanisms and tracing points such that the traced curves are locally identical.

$$[(M, p), (M', p')]$$

Example: Simple Compass is cognate to Peaucellier's "Compound Compass"

The *Coupler Curve* is a circle.

Four exterior joints form a similar figure to the quadrilateral bodies.

Pinning any two is equivalent pinning all four.

Pinned structure has two degrees of freedom.
