

# Project 1

## Building MNIST Classifier

As a first assignment, I do expect you to pass through the [Nielsen's book, chapter 1 \(Links to an external site.\)](#) and implement the given tutorial example. All the codes are presented in the book. Reading the chapter from the beginning also helps you to cover the basics. Please, submit the screenshots (jpeg, word, pdf etc.) on Canvas/Assignments section. Since it is the first assignment, you have almost two weeks to figure out the programming details. And, please do not forget that even it is a long time, it may take longer to solve unexpected problems. Do not wait to do it till the last moment.
