Week 7: Reading and Exercises

Reading

Please re-read Chapter 16. You should also read Section 14.7 on cylindrical and spherical coordinate systems.

Practice Exercises

You have a long list of practice exercises from the past six weeks. It would be a good idea to review these and work through any problems that you did not do when they were first assigned. The practice problems are a good guide to what parts of each chapter I consider most important. You can also expect some more theoretical questions on Thursday's final exam.
