Contract

I do hereby agree to the terms and conditions as listed below. It will be in the individual’s best interest to uphold the honor and integrity of themselves and contribute to the group effort. We agree that although some individuals may have more experience and ability in some areas it is the group that will in fact be graded and evaluated.

Section I. Individual Ability

As previously mentioned we understand that our group is made up of a variety of different backgrounds and experiences. We have broken our group into three main parts in which the three members will have a focus in that specific area.

In the area of oral presentation, organization, and communication [Redacted] will lead the team. It is his focus to make sure that everyone in the team is able to present the material in a professional organized fashion. If anyone on the team needs help with anything in this area, [Redacted] will be there to consult and give advice to. Although [Redacted] has a focus in this area, the team does understand that everyone will help out, and not leave the entire area only up to [Redacted].

In the area of design motivation and initiation, [Redacted] will be the chief ranking engineer. [Redacted] understands that his focus will be on keeping the group moving through the problems as they occur, and start the group going in the right direction. In conjunction with [Redacted], [Redacted] will keep the group on task, and make sure that all work is complete in a satisfactory fashion.

In the area of design implementation, [Redacted] will serve as the chief engineer with the most experience and ability. More specifically, [Redacted] has the most background in the area of the circuitry involved in this project, and will help the entire team implement ideas that they come up with to make this project function. In conjunction with all team mates [Redacted] will work on making the physical entity.

Section II. Team work

As previously stated in the individual section of this contract, we, the team mates understand that there is only one formula in this project: The group is far greater than the sum of the parts. We understand while everyone within the group may possess individual strengths and weaknesses the group is only as strong as the weakest link. Intellectual property also needs to be noted such that when an individual presents ideas within the group, these ideas are owned by the entire group, not just the individual. It is the responsibility of everyone in the group to make sure that we keep our minds focused and working together. We all need to turn in a final prototype and final report, which will reflect the group’s ability to come together.

Section III. Communication

We as group members agree to meet at least twice a week in person to communicate any problems, ideas, and progress of our work. We will do so in a fashion that is encouraging and keep each other focused on the task of completing this project. If at any time there is internal conflict it is the responsibility of the individuals involved to bring things out in the open and discuss these potential problems at these group meetings. Communication will serve as the glue that will keep all of us individuals stuck together, and make our team stronger. If at any time an individual in the group cannot make a
meeting for any reason, then at the next meeting that individual is responsible for bringing the other teammates at least two cookies and one glass of milk. Tardiness is acceptable provided that the individual has a legitimate reason pre approved by the other two team mates.

Section IV. Conclusion
We as the group members do agree to all the terms and conditions provided herein. Through our individual efforts and ability to come together as a team and communicate our successes and failures, we the group members will succeed.

Group Team Contract
EE 2799

We the undersigned on this day of Monday November 10th, 2003 do hereby attest that we have read and agreed upon the following rules and regulations.

- Each team member will complete an approximately equivalent work load with respect to homework, presentations, and project work.
- Each team member will be prompt and prepared for our regularly scheduled meetings, which are tentatively as follows:
  - Monday: Brainstorm, divide upcoming assignments, progress report.
  - Tuesday: Prepare for presentation.
  - Wednesday: Progress report as needed.
  - Thursday: Progress report as needed.
  - Friday: Meeting with senior engineer, check status of homework.
  - Saturday: Compile and finish homework.
  - Sunday: Day off.
- Each team member must give at least 4 hours notice before missing a team meeting.
- Each team member agrees to respect fellow team members, and value their input.
- Each team member agrees to vote on design choices as they arise.
- Each team members agrees to celebrate upon completion of the project.
