Advisor: Angela Taricco

Motivation

Through understanding the necessity of communication combined with the struggle students (with a lack of English background face) in their day-to-day lives, we desired to create an app to mitigate this issue.

Target Audience

Given the increase in the immigrant population alongside the persistent need for effective communication, our app acts as a tool for users to propel their English understanding.

App Description

The app strives to assist language learning in two areas: Reading Comprehension and pronunciation. After carefully considering sentences, the information can be presented and stored in the database. Moreover, the words selected assist with conversational English to allow them to gain benefits in both areas.

Softwares/Tools

Future Extensions

1. Providing the Application with a larger database of questions and variation
2. Iterating the algorithm to promote a finer line between revising old and promoting new content
3. Promoting the teacher's backend of the application to provide a unique learning experience that supplements class
